

## OIB - HU-25C Guardian #524 09/02/16 Science Report

**Aircraft:**

[HU-25A Guardian #524](#) ([See full schedule](#))

**Date:**

Friday, September 2, 2016

**Mission:**

OIB

**Mission Location:**

Kangerlussuaq, Greenland

**Mission Summary:**

Mission: Falcon Southeast Coastal A (priority: high)

This mission is one of two (along with Southeast Coastal B) which are designed primarily to re-fly the "Southeast Coastal" mission from Spring 2016. These two flights work together in an interlaced (working upward from the coast) manner. This particular flight concentrates on the first and third lowermost of the coast-parallel lines. It transits to the east coast along a line from a different mission also flown in Spring 2016, in order to expand post-melt coverage farther south.

Central Greenland cleared some during the course of this morning as weather models indicated it would, but it did not clear enough to permit us to fly a mission there. However southeastern Greenland remained clear so we selected this flight. We encountered some stratus and altostratus clouds on both of the east-west grid lines connecting Kangerlussuaq with the east coast, but for the most part these clouds were quite thin and ATM was able to range through them. The lines on the east coast were completely clear, except for the northernmost 50 km of the inboard line which had a few thin clouds below us. Overall we estimate successful data collection along at least 95% of the flight.

All instruments performed well.

We conducted a ramp pass over Kangerlussuaq at 18,000' prior to landing.

Data volumes:

CAMBOT: 11 Gb images

Narrow Swath ATM: 23 Gb

FLIR: 8.5 Gb

total data collection time: 3.3 hrs

<b>Purpose of Flight:</b>	Science		
<b>Comments:</b>	Science Flight over Southeast Coastal A route where mostly clear skies prevailed except on the final west to east transect where a descent to FL220 was required to stay below an increasing broken to overcast layer at 240. Attempted a ramp pass at FL180 over scattered to broken skies but later determined that a cloud impacted the data collection over the ramp. Six good flights completed out of sixteen projected to date with next flights scheduled for 9/3.
